

Press release

ONTOFORCE unveils DISCOVER 7: the next generation knowledge discovery platform

Ghent, Belgium - 10 September, 2024

ONTOFORCE, a leader in semantic technology for life sciences, announces the launch of DISCOVER 7, the most advanced version of its knowledge discovery platform. DISCOVER is designed to meet the diverse data management needs of the life sciences industry, offering solutions for research, clinical, regulatory, and cross-functional applications.

DISCOVER excels in connecting siloed public, private, and licensed data through its knowledge graph, enabling comprehensive searches across disparate databases via a single interface. The new release features a fully redesigned user interface for faster, more intuitive data exploration, and introduces the DISCOVER Assistant, powered by Generative AI. This Assistant enhances natural language search and summarization, maintaining human oversight for accuracy.

Engineered for seamless integration with AI/ML workflows, DISCOVER ensures data is harmonized, linked, and compliant with the FAIR data principles. Additionally, AI-generated outputs can be fed back into the knowledge graph with clear provenance captured, further enhancing the reliability and utility of your data.

"DISCOVER 7 marks a significant leap forward in continuing our mission to empower life sciences professionals with solutions that drive innovation and informed decision-making," says Valerie Morel, CEO of ONTOFORCE. "Our users have stayed top-of-mind as we've worked to redesign DISCOVER. We've ensured that with its new functionality and interface, DISCOVER will enable users to gain insights from data faster than ever before."

DISCOVER can be rapidly deployed within large enterprise ecosystems, including seamless integration into data mesh and data fabric architectures. With predefined applications, use cases, prebuilt pipelines, and instant access to public data, DISCOVER offers a swift installation timeframe.

Our comprehensive services offering further accelerates value realization, providing the support organizations need to maximize the platform's impact and fully leverage its capabilities within complex data environments - crucial in a highly competitive market like the life sciences where time, productivity and efficiency are of essence.

ONTOFORCE invites industry professionals to join the DISCOVER 7 Product Launch Webinar on 3 October, 2024, where their experts will showcase the platform's capabilities and answer questions. Personalized demos are also available for organizations interested in exploring how DISCOVER can meet their unique needs.

About ONTOFORCE:

ONTOFORCE helps life sciences organizations accelerate research and drug development for improved patient outcomes by unlocking hidden insights from data. Founded on semantic technology and an ontology-based knowledge graph, their flagship product, DISCOVER, is a data and knowledge platform developed specifically for the life sciences industry. DISCOVER seamlessly connects an organization's internal, siloed data with licensed data and public data in one easy-to-use, customizable platform, enabling efficient data exploration and analysis.

DISCOVER has over 10,000 users across the globe and is deployed by many leading pharmaceutical and biotechnology companies. Users include scientific researchers, bioinformaticians, data scientists, and many other roles.

ONTOFORCE is headquartered in Ghent, Belgium and has a secondary office in the United States in Cambridge, Massachusetts. Learn more about ONTOFORCE at ontoforce.com.
