A BTI Newsletter - March 2026

Our version of March Madness

Every year around this time, a lot of attention turns to colleges and universities as the NCAA basketball tournament—better known as March Madness—tips off. Fans fill out brackets, Cinderella teams emerge, and the nation spends a few weeks focused on campuses across the country.

For LabMovers.com, however, colleges and universities are in the spotlight all year long.

That's because LabMovers.com specializes in relocating research laboratories to and from some of the most respected academic institutions in North America. From major research universities to specialized institutes, our lab relocation team help researchers and scientists safely transport years—sometimes decades—of work from one facility to another.

It's our year-round March Madness.

Instead of basketballs and brackets, the action involves highly sensitive equipment, frozen specimens, delicate instruments, and complex logistics. In some cases, the stakes are even higher than a championship game. Many of the researchers LabMovers.com assists are conducting work that advances medicine, improves public health, and, in some cases, helps save lives.

It's even included moving a Nobel Prizewinner, [Dr. Jack Szostak](#).

And unlike the NCAA tournament, where one team ultimately cuts down the nets, we measure success a little differently. A "win" means specimens arrive intact, equipment is safely transported and reinstalled, and researchers experience little to no downtime before getting back to their work.

March Madness may only last a few weeks. But in the world of scientific discovery, LabMovers.com's March Madness is a way of life.

Planning a lab relocation? If you're a facilities manager or lab manager preparing to move to a new facility—or even reorganizing labs within your current building. Even if you're just thinking about it and have questions, [give us a call](#). We're happy to hear you out and offer some thoughts.

Our Brackets

Universities and Research Institutions LabMovers.com has worked with:

- Massachusetts Institute of Technology
- Harvard University
- University of Chicago
- University of California, Berkeley
- University of California, Davis
- University of Texas at Arlington
- Washington University in St. Louis
- University of Massachusetts Amherst
- Bridgewater State University
- McGill University

University-affiliated research institutions:

- Harvard Medical School
- Massachusetts General Hospital
- Marine Biological Laboratory

What clients have to say about Labmovers.com

"This move involved lot of sensitive equipment. George's team provided specialized packing materials to pack equipment whenever the vendors didn't provide package materials.

The team was able to give us an accurate arrival time.

George really listened to my concerns and put those into action. He consolidated majority of items going to the same part of the lab on pallets. Those pallets were then delivered to where they would go in the lab. So, when it came time to unpack it wasn't a treasure hunt. Everything was right where it was supposed to be.

I've been working in labs since the 1990s. In that time, I've only had one move even close to the size of this one. The rest of the moves had usually been within the same building. I would definitely consider using Labmovers.com for an upcoming move."

--Fanny Ng, lab manager, Szostak Lab
