CYPHER LAUNCHES AI PLATFORM TO SUPERCHARGE LAB EFFICIENCY

Cypher is an AI-powered software that enables scientists to automate data analysis, create protocols and accelerate research - no coding required.

CAMBRIDGE, MA, April 16, 2025 – Today, Cypher, an AI-powered software platform for scientists, officially launched its flagship product designed to supercharge work for research teams. Cypher enables scientists to create, organize, and share custom AI tools—including automated data analysis, visualization, and protocol creation—without knowing how to code.

Cypher addresses one of the most persistent challenges in science: the wasted time and effort that scientists spend on repetitive, low-scientific-value tasks. Using Cypher, research teams can complete these tedious tasks *orders of magnitude* more quickly—saving valuable time and accelerating discovery.

"Cypher has been phenomenal for protocol creation by helping us define new experimental methods; standardize protocols used; and gain transparency on method differences between collaborators," said Scott Robinson, President and CSO at MicroQuin, a cutting-edge biotech startup focused on drug development. "We've drastically reduced the time spent on data analysis, which has allowed us to identify promising drug candidates more quickly and confidently. I am generating more data now because I don't have to lose more time on the analysis. What would take me half a day to generate five graphs is *now taking me under 45 minutes.*"

Researcher Rashi Jeeda at MIT agreed, saying, "Cypher has been incredible for quickly and interactively visualizing my data in conjunction with storing protocols. It has drastically cut down the time I spend tweaking code for small plot changes, and its integrated coding environment makes it faster and more efficient for data processing than other AI tools."

Cypher's product launch follows three months of development and real-world validation with users across biotech, pharma, and academic labs. The platform is now available to scientists looking to revolutionize the efficiency of their lab. Sign up for a free account at cypherbio.ai.

About Cypher
Cypher is an AI-powered platform built for supercharging scientific research. Designed to streamline protocol creation, data analysis, visualization, and team collaboration, Cypher enables research groups to run better experiments and accelerate discovery. Whether you're in biotech, pharma, or academia, Cypher gives your team the tools to significantly reduce repetitive, low-scientific-value tasks and focus on what matters most to science. Built by scientists for scientists. Learn more at: cypherbio.ai
